

Contributions to Botany; (V, 267, [15] P., Plates 43-87)

This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1860. Excerpt: ... shows that it belongs to Ehretiaceae, and either to Bourreria or Crematonia, probably the latter, on account of its Mexican origin, the short tube of the corolla, the large imbricated lobes of its border, and the stamens tomentose at base: it is a species near *C. formosa*, from which it appears to differ little. The character of the fruit was probably drawn from the drupe in an immature state, when the achenia were agglutinated together. It is described as a tree of middle size, with a scabrid, rough trunk, its leaves being 3-4 inches long, upon elongated petioles. On The Comparative Carpical Structure Of The Ehretiaceae And Cordiacks. Thus far the carpical structure of the Ehretiaceae has been explained, especially under the typical form of Ehretia; and it will tend to a better comprehension of the subject if I offer a few observations upon Cordia, because a very distinguished botanist has proposed to amalgamate Ehretiaceae with Cordiaceae. M. BaiHon, in an instructive analysis of the ovary of Cordia (Adans. iii. 1, pl. 1), points to the analogy existing in the early development of the ovaries of Cordia and Heliotropium, and, without sufficient consideration of the subject, he pronounces these two genera to be inseparable; and, as the latter has been referred by some to Ehretiaceae, he would unite the Cordiece, Ehretieoe, Jteliotropiece, and Borragineos into one family Cordiacee). He thus divides it into two groups:--1. Borraginee proper. 2. Cordiacee, subdivided into A. Cordiea, having an embryo with plicated cotyledons. B. Heliotropiece, with simple cotyledons, without albumen. C. Tournefortiece, with simple cotyledons, with albumen. But he does not state in

which of these he would place the Ehretiaceae. These were the inferences he drew from his exa...
